- ▶ The Truth About SCR.

## Why we chose advanced EGR

### It's all about taking the burden off the customer.

As we set out to meet the 2010 standards, we're challenged to keep the burden of compliance as our responsibility, not place it on those who own and operate our trucks. Today Navistar® is proud to stand behind the approach we've been developing for nearly a decade: advanced EGR.

### Advanced EGR makes sense.

With our advanced EGR solution, operating and maintenance requirements don't change for your drivers or mechanics. Compare this to the SCR solution, where changes include significant add-on after-treatment equipment, additional attention from your drivers, and new maintenance and servicing requirements for your technicians. With SCR, the burden on you is clear, and that's why we believe advanced EGR just makes sense.

### We looked to the future.

2010 is just another step in a long road to cleaner vehicles. Therefore, we set out to develop a solution that works for not only today, but is the right technology solution for tomorrow. And some of our European counterparts are also following the same path, introducing EGR-based systems after years of experience with SCR. It's a sign that customers are demanding a better way. We are also carefully monitoring industry experts as they begin to question the resale values of SCR vehicles in the future.
